

3-QA Base Frame - Supplement

There are 8 small projections on the front side of the frame. These are for other purposes but are left on in case they might be useful to you in some way. If not, they will easily grind away.

As a bare steel weldment, these frames ship with an anti-corrosive surface treatment. This coating does not affect weldability and can be wiped, washed or brushed away when ready for finishing.

Note: 3-QA frames are not intended to be used for the construction of homemade pallet fork frames. These base frames depend heavily on other components for adequate strength for that purpose, which are not included.

Thank you!
